TC-UX-01: Usability walkthrough (RRS-NF-005)

Requirement: a usable interface with clear labels and sensible defaults, needing no manual configuration to get started. **Pass:** a first-time user finishes every task below without help.

Automated part: `tests/test_usability.py` (labels, landmarks, defaults, status-colour contrast). **Manual part:** this walkthrough, done once with someone who has not used the app (not a team member).

Tester	Date	Device and browser

Tasks (read the task aloud, then stay silent and watch)

#	Task given to the tester	Done without help? (Y/N)	Time (min)	Where they hesitated
1	Create an account			
2	Log in			
3	Find trains from Bengaluru to Chennai for tomorrow			
4	Book one ticket and pay			
5	Find out whether your booking is Confirmed, RAC or Waitlisted			
6	Cancel the ticket and say how much money comes back			
7	(Admin tester) Add a train, then add a schedule for it			

Accessibility checks (one person, five minutes)

Check	Pass?
Whole booking flow works with the keyboard only (Tab, Shift+Tab, Enter)	
First Tab press on any page shows "Skip to main content"	
Page is still usable at 200% browser zoom (no sideways scrolling for the form)	
Booking status can be told apart in greyscale (symbol and word, not only colour)	
Error messages say what to fix, next to the field	

Result

All tasks done without help and all checks passed: **PASS / FAIL** (signed: _____)

Fixes made after the walkthrough:
